Briones Pilot Project Description

The Briones Pilot Project is a two-year pilot program to test strategies in addressing trail congestion, trail safety, and illegal bootleg trails, which have negative impacts on wildlife, including sensitive and endangered species.

The pilot project is limited to the Pilot Project Zone located in the northeast corner of Briones Regional Park, which is accessible from the Reliez Valley Staging Area, Alhambra Creek Staging Area, and Briones Road Staging Area.

The pilot project will establish specific Briones Pilot Project rules, including limiting specific trail uses (biking and horseback riding) to certain days of the week, and temporarily opening some narrow trails to bikes only, among others. Other illegal bootleg trails will be closed and restored to protect natural habitats for wildlife.
