

# The Restored Wetlands Supports Migratory Waterfowl

**T**he Pacific Flyway extends from British Columbia to Mexico and South America and is used during spring and fall migrations by millions of birds. Waterfowl, which nest in the prairie pothole region of the Pacific Northwest, migrate south in the fall and rely on healthy wetlands to "over-winter." Hundreds of thousands of ducks rest and feed in San Francisco Bay during the course of their long journey. Areas like Martin Luther King, Jr. Regional Shoreline are important sources of shelter and forage for them.

Special thanks to: Port of Oakland, The Golden Gate Audubon Society, Save San Francisco Bay Association, Sierra Club, Inc., Citizens for Alameda's Last Marshlands, Regional Water Quality Control Board, and U.S. Army Corps of Engineers for their dedication and efforts to restore this site.
