Working Together …

The East Bay Regional Park District is working with local animal shelters throughout the East Bay to safely relocate and rehome free-roaming domestic cats found in parks.

In the beginning …
Cats and humans have a long-standing partnership. Our relationship developed thousands of years ago, when humans started storing agricultural grains, including wheat and barley. Grains attracted rodents, and cats were happy to use their keen hunting skills on these relatively easy meals. Humans were happy for the help controlling rodent populations.

Natural hunters …
The growing populations of domestic cats maintained their superb hunting skills. When given the chance, they skillfully hunted small mammals, reptiles, and birds in their new neighborhoods and nearby parks. Songbirds began to disappear, and humans knew if we wanted to maintain healthy environments, we also needed to build more responsible relationships with our beloved felines.

Healthy parks …
As with any healthy relationship, setting boundaries benefits all parties involved—humans, cats, and the wild animals impacted by domestic cats. As the partnership between cats and humans continues to grow and evolve, we can all help make it a healthy one by practicing the following:

• Rehome cats responsibly. If your cat needs a new home, contact your local animal shelter. Never abandon pets in parks.

• Keep cats safe by keeping them indoors. It’s a hard life outside, with car strikes, predation, and disease taking a major toll on outdoor cats.

• Never leave cat food outdoors. Food dishes attract wildlife, such as skunks and raccoons, increasing predation, disease, and wildlife conflicts.

• Report cats in parks. The Park District works with local animal shelters to safely remove, rehome, and relocate cats found in its parks. Alert park staff or email stewardship@ebparks.org if you see a cat in a park.

Populations grow …
Cats and humans both benefit from the proximity of the other. Humans appreciate cats’ quirky personalities and the comfort they bring to a household. Cats are beloved family members across the globe, and their populations have grown drastically.

The global population of domestic cats is estimated to be around 600 million— in contrast to their wild cousins, such as bobcats and lions, whose total combined populations barely reach 100 million.

Scientists estimate that domestic and feral cats kill around 2.4 billion birds annually in the United States alone. The extinction of 63 species of birds, reptiles, and mammals across the globe are attributed to cats.

The East Bay Regional Park District is required by law to protect native wildlife within its parklands, including threatened and endangered species. There are hundreds of species in the Park District that are protected by federal and state law.

The earliest evidence of a cat living in direct association with humans is a young wildcat who was buried alongside a human 9,500 years ago in Cyprus.
